YOUR RUG

SIZE	FIBER	CONSTRUCTION	YOU ASKED US TO WATCH
6×9	Wool	Machine-made	

.6 oz

DRY SOIL REMOVED FROM YOUR RUG

Weighed on our plant scale after dusting and before the wash. Dry soil sits deep in the pile, where a vacuum cannot reach.

Before

What came out

After

WHAT WE DID

1. Dusted out the dry soil and weighed it.
2. Washed gently for the fiber.
3. Dried in our drying chamber.
4. Fringe brightening.

THE RESULT

Beautiful pattern, wool is in great condition, fringes are showing their age.

CARING FOR YOUR RUG

Rotate it every six months. Turn it end to end so wear is even.

Vacuum with the beater bar off. Suction only, to protect pile and fringe.

Blot spills, never rub. Press a clean white cloth down to lift the spill.

For this rug: Keep wool & fringe away from harsh chemical cleaners.

Next cleaning suggested **November 2027**

Dry soil is the soil removed by dusting before the wash. It is one measurement of one rug, not a rating, and it depends on the rug's size, pile, fiber, age and use.
